

Window shutters from Griesser.
Wing shutters with window frame

Wing shutters with window frame

The window frame system for rapid and easy installation at the construction site. The window frame surrounds the window opening; on three sides in the standard version. The wings are pre-mounted together with the selected armature at the factory where we use our proven SystemFix mounting system. Attach the window frame on the window, fit the wing shutters and you're done! And all of that in the familiar high quality and color selection from Griesser.

Simple installation

PRODUCT ADVANTAGES IN DETAIL

Simple measuring

Measure the width and height of the window and already you have the dimensions for the window frame.

Simple installation

Thanks to the preinstallation of the armature, the window frame can be fitted to the facade simply and rapidly.

Enhanced light-proof version

Through three-sided support surface of the wing shutter on the frame rebate.

Optical framing of the window

The window frame sets design accents, thus making your facade a special eye-catcher.

COLORS

The colors of our window roller shutters should reflect your wishes, lend distinction to the character of the architecture and create a personal atmosphere. These wishes are a daily challenge to our developers, planners and lacquerers.

Powder coating

The powder coating of aluminum has proven to be an environmentally friendly, cost-appropriate and long-lasting alternative to lacquering. It is resistant to both impacts and weather.

RAL, NCS, VSR and Metallic colors as well as wood decor

The wide color spectrum from Griesser leaves nothing to be desired. Select your desired color from our two standard color collections GriColors and GriRal Colors and lend your building an individual note.

Surfaces Variety for every purpose

With the aid of a special coating process, Griesser window roller shutters can be produced in a variety of surface appearances such as smooth and finely structured. The surface structure provides the color or the decor once again with a new appearance.

Wood materials, facade plates and textiles

In addition to the colors, a variety of structures is also possible. The unique feature here is the wood decor: It convinces not only by its astoundingly true-to-nature appearance, but also by its convincing weather resistance.

Special combinations of materials also contribute to the great variety of Griesser window roller shutters. From individually printable fabric covers made of Soltis textile to slat versions made of natural wood, Plexiglas or Fundermax – there are practically no limits to fulfilling customer preferences.
